*1a* — Nicely done! You have shown that you can code up some very recognizable and faithful characters. Kudos on the attention to detail. (+)

*4a* — Your code is straightforward and clearly yields the desired results. Good job! (+)

*4b* — You successfully separate your data from your drawing code. If there is any knock to make here, it's that you only parameterized location instead of something more specific. But I'm pretty sure that you realize the benefit of doing that now, and will take care of that when you put up your animated scene. (+)

*4c* — Your code is readable, with helpful comments for indicating which code is meant to draw what. Definitely called for here! (+)

*4d* — You're very successful in running with the canvas documentation to get exactly the visuals that you wanted. (+)

*4e* — Commit frequency and messages are appropriate to the work done. (+)

*4f* — Submitted on time. (+)
